

# OBERON EHS

Modern EHS Management App | Risk, Incident, and Compliance Hub

Official Portal: [www.oberonpss.com](http://www.oberonpss.com) • Sign Up & Log In: [app.oberonpss.com](http://app.oberonpss.com)

**Oberon EHS** is an advanced, field-ready environmental, health, and safety suite engineered to digitize regulatory compliance, eliminate administrative friction, and protect workforce lives in real time. Deployed as a high-performance mobile application, it unifies risk assessments, statutory security forms, GPS site patrols, and rapid incident reporting into a single intuitive command center.

## TAILORED INDUSTRY CONFIGURATIONS

Select your primary workspace on registration to load pre-configured compliance databases:

|  |  |  |  |                    |
|--|--|--|--|--------------------|
|  |  |  |  | Food Safety        |
|  |  |  |  | Emergency Services |

### MOBILE & WEB SSO

Google & Apple integrations

### AI ASSISTANT

Automated compliance & logic

### GPS SITE PATROLS

Precise geo-tracking check-ins

### STATUTORY TEMPLATES

Pre-built compliance forms

## 1. REAL-TIME SAFETY ANALYTICS & CENTRALIZED DASHBOARD

The Oberon EHS home environment functions as a dynamic dashboard that compiles multi-layered field security, active risk indicators, and statutory logs into a clear, unified view. Security managers get real-time awareness of ongoing safety levels across the organization's physical sites.

### DASHBOARD METRICS SNAPSHOT

|              |           |               |
|--------------|-----------|---------------|
| 3            | 0         | 0             |
| Active Risks | Incidents | Security Rep. |

#### Risk vs. Compliance Monthly Analytics:

A dynamic line chart logs historical data (Jan to Jun) showcasing current risk mitigation progress against statutory compliance levels. Managers can monitor safety curves and compliance achievements over time.

### ACTIVE CONTROLS

- **Risks:** Live counters tracking active hazard assessments currently requiring active remediation in the field.
- **Incidents:** Urgent incident filings logged by operators, requiring immediate executive escalation and reporting.
- **Security Reports:** Standardized reports filed regarding premise physical integrity, safety patrols, and lockouts.

## 2. DYNAMIC FIELD HAZARD ASSESSMENTS & 'AI HELP'

Field safety engineers can perform on-the-spot audits via the interactive **New Assessment** portal. By enabling the proprietary **AI Help** system, the app assists with intelligent hazard classification and instant mitigation planning directly from the job site.

| Assessment Field    | Function & Supported Inputs                                                    | Compliance Benefit                                               |
|---------------------|--------------------------------------------------------------------------------|------------------------------------------------------------------|
| Project Site        | Drop-down selector of registered sites (e.g., 'Cheapside' or 'General').       | Enables geo-isolated reporting and statistics.                   |
| Hazard Type         | Text entry (e.g., Asbestos, Falling objects) supported by AI predictive entry. | Accurate categorization of physical risks.                       |
| Mitigation Strategy | Guided text input mapping exactly how the field operator will reduce the risk. | Builds defensive protocols and audits.                           |
| Risk Level          | Low (Green)   Medium (Orange)   High (Red) interactive selector.               | Enables visual sorting and prioritizes urgent hazards.           |
| Media & Evidence    | Instant Camera integration or Gallery uploads to attach photographic proof.    | Visual proof for audits and insurance verifications.             |
| Save & Report       | Single-click 'Save & Generate PDF Report' command button.                      | Saves to centralized servers and creates instant printable PDFs. |

### 3. IMMEDIATE FIELD INCIDENT REPORTING

---

When an unexpected hazard or active safety issue emerges, operators have immediate access to a dedicated incident reporting channel. Designed for fast logging, the system includes a bold, prominent **REPORT INCIDENT** quick-action button that triggers organization-wide alerts instantly.

- **One-Touch Urgent Reporting:** Quickly flags site accidents, safety failures, or environmental hazards.
- **Trend Analysis:** Automatically updates 'Incident Trends' sparklines to identify recurring issues.
- **Verifiable Safety States:** Features a prominent green checkmark validation 'No incidents reported yet. Site is currently safe!' to verify complete operational alignment.

## 4. PROJECT SITES & GPS-ACCURATE PATROL CHECK-INS

Through localized project site views (such as project 'hanez'), the application provides meticulous operational controls and team tracking. Administrative security structures are maintained coherently, ensuring a transparent chain of custody from the field to the corporate headquarters.

| SITE HEALTH & TEAM ACCESS                                                                                                                                                                                                                                                                                                                                                                                                                     | HIGH-PRECISION SITE PATROLS                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"><li>• <b>Compliance Health Indicators:</b> Multi-parameter dials displaying audit pass rates (e.g. 0% audit pass), active risk indices, and logged incidents for individual site assessments.</li><li>• <b>Administrative Controls:</b> Tracks site administrative permissions and owner classifications (e.g. <i>boxangeltv101@gmail.com</i> listed as Owner / Admin) for complete audit trails.</li></ul> | <ul style="list-style-type: none"><li>• <b>GPS Coordinate Registration:</b> Security guards and safety supervisors check-in at physical coordinate points (e.g. <b>Main Entry / Base</b> registered at 50.8295, -0.1371).</li><li>• <b>Register New Check-in Point:</b> Instant GPS location capture buttons map specific patrol checkpoints and high-risk safety zones directly onto digital site layouts.</li></ul> |

## 5. STATUTORY COMPLIANCE & SECURITY REPORTS

To fulfill statutory requirements across diverse sectors, Oberon EHS integrates standard, pre-built templates such as the **New Security Report**. This ensures mandatory data capture for standard safety tier rules.

| PART A: ADMINISTRATIVE DETAILS                                                                                                                                                                                                                                                                                                                                                                   | PART B: STANDARD TIER COMPLIANCE                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Collects essential physical and legal location parameters, including: <b>Premises Name *</b> (e.g. Retail, Event site) <b>Full Address &amp; Postcode *</b> for geo-accuracy <b>Responsible Person *</b> (Individual or Corp) <b>Designated Senior Officer</b> and licensing details <b>Max Capacity *</b> to monitor overcrowding risks <b>Qualifying Activity *</b> to set legal safety bounds | Collects structured evacuation and emergency physical routing procedures, including: <b>Evacuation Procedure *</b> — Immediate routing protocols out of the facilities. <b>Invacuation Procedure *</b> — Safe physical routing to interior assembly zones. <b>Lockdown Procedure *</b> — High-threat isolation, secure barricades, and communications. |

## 6. SMART AI ASSISTANT & PROFESSIONAL UPGRADES

The integrated **AI Assistant** (marked with orange sparkles icon in the sidebar) delivers real-time, intelligent responses to operator queries in the field. Managers can quickly ask about regional regulatory standards, hazard classifications, or compliance procedures. Upgrading to a **PRO Account** removes all limits, unlocking unlimited safety jobs, unlimited sites, and advanced AI-generated incident reports.
